

Vegetable friends and enemies

Beans

- Avoid planting near: Onions, garlic, leeks, shallots, and chives
 - These alliums can stunt bean growth
- Friends: Corn, cucumbers, carrots, and peas

Carrots

- Avoid planting near: Dill and parsnips
 - Dill attracts pests that target carrots. Parsnips share similar pests.
- Friends: Onions, leeks, and lettuce

Cabbage Family (Broccoli, Cauliflower, Kale, Cabbage, Brussels Sprouts)

- Avoid planting near: Tomatoes, strawberries, and pole beans
 - These combinations can attract pests or compete for nutrients
- Friends: Onions, garlic, beets, and herbs like dill or rosemary (repel cabbage moths)

Corn

- Avoid planting near: Tomatoes
 - Both attract corn earworms/tomato fruit worms
- Friends: Beans, peas, pumpkins, squash, cucumbers (the traditional “Three Sisters” idea)

Cucumbers

- Avoid planting near: Potatoes and aromatic herbs like sage
 - They compete for nutrients and may stunt growth
- Friends: Beans, corn, and peas

Lettuce

- Avoid planting near: Cabbage Family Plants
 - These can attract the same pests
- Friends: Carrots, onions, radishes, and cucumbers

Onions (and other alliums: garlic, leeks, shallots)

- Avoid planting near: Beans and peas
 - They slow down bean and pea growth
- Friends: Carrots, lettuce, and beets

Vegetable friends and enemies (Continued)

Peppers

- Avoid planting near: Fennel and kohlrabi
- These can inhibit pepper growth
- Friends: Basil, onions, carrots, and spinach

Potatoes

- Avoid planting near: Tomatoes, peppers, cucumbers, pumpkins, and squash
- They share diseases like blight and compete heavily for nutrients
- Friends: Beans, corn, and cabbage

Tomatoes

- Avoid planting near: Potatoes, corn, cabbage, and fennel
- These combinations attract pests or spread disease
- Friends: Basil, onions, carrots, and marigolds
